

LPL - PITHORAGARH CC - 2
CHILKOTI BHAWAN, BANK ROAD,
PITHORAGARH

Name	: Mr. DEVESH MEHARA	Collected	: 29/5/2021 8:19:00AM
Lab No.	: 305664664	Age: 24 Years	Gender: Male
		Received	: 29/5/2021 5:32:54PM
		Reported	: 1/6/2021 7:49:25PM
A/c Status	: P	Ref By : Dr. D.SUNIL.REDDY	Report Status : Final

Test Name	Results	Units	Bio. Ref. Interval
D - DIMER, QUANTITATIVE @ (Immunoturbidimetry)	<0.27	mg/L FEU	<0.50

Note

1. Degree of D-dimer increase does not definitely correlate with the clinical severity of associated disease state
2. Increased levels have a high probability of Venous thromboembolism (VTE) and require clinical correlation.
3. Lipemia falsely decreases D-dimer levels
4. Test conducted on Citrated plasma.

Comments

D-Dimer is one of the measurable byproducts of activation of the fibrinolytic system. It assesses fibrinolytic activation and intravascular thrombosis. D-dimer assays are characteristic for Disseminated Intravascular Coagulation (DIC) as this test demonstrates simultaneous presence of thrombin and plasmin formation. It can also be elevated in individuals with large vessel thrombosis, soft tissue hematomas, Pulmonary embolism, recent surgery, active or recent bleeding, pregnancy, liver disease, malignancy and hypercoagulable states. D-Dimer is of particular value in excluding the diagnosis of venous thromboembolism among patients at high risk.

C-REACTIVE PROTEIN; CRP, SERUM (Immunoturbidimetry)	0.11	mg/L	<5.00
---	------	------	-------

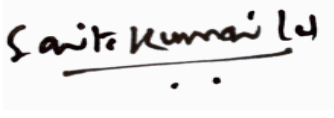

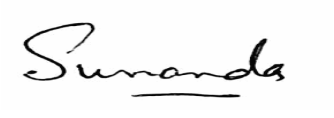

Comments

CRP is an acute phase reactant which is used in inflammatory disorders for monitoring course and effect of therapy. It is most useful as an indicator of activity in Rheumatoid arthritis, Rheumatic fever, tissue injury or necrosis and infections. As compared to ESR, CRP shows an earlier rise in inflammatory disorders which begins in 4-6 hrs, the intensity of the rise being higher than ESR and the recovery being earlier than ESR. Unlike ESR, CRP levels are not influenced by hematologic conditions like Anemia, Polycythemia etc.
